

GPCA Process Control Analysis and Tuning Workshop In Thailand 2009 (Intermediate Level - 3 Days)

GPCA and Graham Jefferson have developed a unique strategy to tackle challenging problems in process control assets for the power, petro-chemical and oil and gas industries. The approach that we have developed studies the process control issues from a very comprehensive perspective e.g. process control loop analysis, design, optimization, benchmarking and training. We utilize our strong foundation in process control and instrumentation know-how, experience, skills and advanced control optimization and performance monitoring software to come up with the best process control strategy and asset management in the market today.

Our 3-days workshop covers strong process control foundation and cutting-edge control loop optimization strategies which is extremely precise and robust. No more PID loop tuning guess work. Loop tuning is made simple and effortless by Graham Jefferson. The course will equip process engineers and technicians with the confidence and skills to handle any difficult process control issues effectively. Our solution is vendor neutral and is applicable for control strategies from any make of control system and field instrumentation. We work sincerely from our heart to deliver the best to you and we guarantee that you will get your investment worthwhile.

The workshop details are as below:

Venue: THE EMERALD HOTEL
99/1 Ratchadapisek Road, Din Daeng, Bangkok 10400 Thailand
Date: 24th -26th June 2009
Time: 9:00 AM to 5:00PM
Instructor: Mr Graham Jefferson
Course fees: US \$1,490.00 per person (exclusive of 7% VAT)
Note: Inclusive of 2 tea breaks and lunch
Inclusive of usage of Matrikon CPO and Techmation Protuner
Participant must bring their own laptops

We have already received participation from EGAT and other major power companies in Thailand. Limited seats are available now. Please fill up the form below to enroll for the PCAT workshop in Thailand before the seats run out.

Yours truly,

KP Chuang
